

ComicCraft – Brainstorming & Ideation Discussion

Member 1 – Muhammad Haaris.B: Problem Identification

“Our idea is to develop ComicCraft, an AI-powered comic story creator. Many people have creative story ideas but find it difficult to convert those ideas into complete comic stories. We can use Gemini models to help users generate characters, dialogues, scenes, and storylines from a simple idea.”

Member 2 – Bharath.N: Proposed Solution

“ComicCraft can provide a simple interface where the user enters a story concept or prompt. The Gemini model can understand the idea and generate a structured comic story with chapters, scenes, characters, dialogues, and descriptions. This can make comic creation easier for beginners.”

Member 3 – Gowtham.S: AI Features & Innovation

“We can make the project more useful by adding AI-based character and scene generation. Gemini can help maintain consistency between scenes and generate creative dialogues. The system can also allow users to modify the generated story instead of starting from the beginning.”

Member 4 – Subash.S: User Experience & Workflow

“The application should have a simple workflow: enter an idea, generate the story, review the characters and scenes, edit the content, and finally create the comic. A clean and colorful interface would make ComicCraft attractive and easy to use.”

Member 5 – Balasriganth.M: Final Idea & Future Scope

“Our final concept is to create an AI-assisted platform that combines storytelling and comic creation. In the future, ComicCraft could support multiple languages, different comic styles, voice narration, image generation, downloadable PDF comics, and sharing features.”

Final Brainstorming Outcome

Project Name: ComicCraft

Concept: AI Comic Story Creator using Gemini Models
